

Geographical Analysis:

WHERE DOES OUR FOOD COME FROM **and what does feeding the world actually take?**

Land use

Agricultural land covers approximately _____ % of the Earth's surface.

Of this, about _____ % is used to graze farmed animals or to grow crops to feed farmed animals, which means only _____ % is used to grow food directly for people.

This matters geographically because _____
_____.

Evidence from the data

When I looked at the land use data, I noticed that _____
_____.

For example, producing 1 kg of lamb requires _____ m² of land, whereas producing 1 kg of _____ requires only _____ m².

This shows that _____
_____.

Conclusion

Overall, I think the most important geographical idea from this lesson is

because _____
_____.

One question this raises that I would like to investigate further is _____
_____.
